

Olist Revenue Intelligence

What drives revenue and customer satisfaction across Brazil?

Steven Siciliano · Data Analyst ·
github.com/Steze96

The Data

- ~99K orders · ~340K rows of Brazilian e-commerce data
- 8 relational tables (PostgreSQL schema, foreign keys)
- Time span: Sept 2016 – Sept 2018
- Cleaned & validated in SQL — zero rows deleted
- Revenue locked at R\$13.59M — every query verified against it

Delivery speed decides your rating

The clearer a shipment's speed, the higher its rating.

Geography drives revenue, not category

Geography drives revenue, not category

THE PATTERN — Revenue concentrates by geography, spreads across products.

THE NUMBERS — Top 5 states = 74%. Top 5 categories = 40%.

THE MOVE — Target marketing by state, keep the catalog broad.

Where and when the revenue happens

- Revenue is geographically concentrated — SP alone drives ~38%
- Growth was steady, peaking each November (holiday demand)
- **Decision:** focus marketing on top states, stock up before Q4

Monthly revenue grew steadily

São Paulo dominates revenue

From findings to action

1. Fix delivery speed

Set a ~10-day delivery target and fix the slowest shipments.

1-star orders take 2x longer to arrive than 5-star — delivery drives satisfaction.

2. Market by geography

Concentrate marketing spend on top states.

Just 5 states drive 74% of revenue; São Paulo alone is ~38%.

3. Keep the catalog broad

Maintain a wide product range.

Revenue spreads across categories — top 5 are only 40%, so no product dominates.

4. Plan for the peak

Plan inventory around the Q4 holiday peak.

Revenue peaks every November (Black Friday demand).
